

AI Integration Workflow

1. Purpose of AI Integration:

The AI Campus Assistant incorporates Artificial Intelligence to provide intelligent academic support beyond traditional campus management functionalities.

The AI module assists students by:

- Answering academic questions
- Generating personalized study plans
- Creating quizzes from selected topics
- Summarizing lecture notes
- Providing assignment guidance

This helps students learn more effectively and reduces the time required to search for academic resources manually.

2. AI Service Used

The system will integrate with the Gemini API and Groq.

The model will be used to process user prompts and generate intelligent responses.

3. AI Input

The AI system receives user-generated requests such as:

- Academic questions
- Study plan requests
- Quiz generation requests
- Lecture note content
- Assignment-related queries

Example:

“Create a 7-day study plan for Data Structures.”

4. AI Output

The AI service returns:

- Educational explanations
- Personalized study schedules
- Generated quizzes
- Summarized notes
- Assignment guidance

Example:

“
Day 1: Arrays and Linked Lists
Day 2: Stacks and Queues
...
”

5. Benefits of AI Integration

The integration of AI provides several benefits:

- Personalized learning support
- Faster access to academic information
- Improved study efficiency
- Automated content generation
- Enhanced student productivity
